

Import Data using Transform Maps (Spreadsheet)

Creation Of Spreadsheet

Description

The spreadsheet data will be uploaded into a ServiceNow **Import Set Table**, where it will be validated and transformed before being inserted or updated in the target banking table using a **Transform Map**.

Prepare the sheets

Open New Google Spreadsheet

Create New Google Spreadsheet with sample data as shown below

Employee ID	Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Guja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Meghana Katoju	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay Kumar	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitla Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Ravi Teja	test10@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Srinu Nandipalli	test15@gmail.com	ServiceNow	Hyderabad

Download the spreadsheet as Sample Spreadsheet.xlsx format.

Creation of Tables

Description

The **Import Set Table** acts as a temporary staging table for the data uploaded from the spreadsheet. The imported spreadsheet records are stored here before transformation.

Create new Custom table

Navigation:

Tables > Create New

Label: Employee Test Name: u_employee_test

After creating and saving the Employee Test table

scroll down and go to related links

click on show form

	Column label	Type	Reference	Max length	Default value	Display
X	Employee ID	String				false
X	Employee Name	String				false
X	Email	String				false
X	Department	String				false
X	Location	String				false

On the form, locate the **Form Context Menu / Additional Actions** option on the left side of the form header.\

Click the **Form Context Menu / Additional Actions** icon.

Click configure , select **Form Layout**.

The **Form Layout** page will open, where you can configure the fields displayed on the form

After opening **Form Layout**, click **New** to create a new field.

Enter the field details:

Column Label: Employee ID

Type: String

Click **Add** to create the field.

Repeat the same steps to create the following fields:

Employee Name – Type: String

Email – Type: String

Department – Type: String

Location – Type: String

After creating all the required fields, click **Save**.

Verify that the newly created fields are displayed on the **Employee Test** form

The screenshot shows a ServiceNow form titled "Employee Test" with the subtitle "New record". The form contains five input fields: "Employee ID", "Employee Name", "Email", "Department", and "Location". A "Submit" button is located at the top right of the form. Below the form is a large empty area with a "Submit" button on the left and a refresh icon on the right.

Click on Submit or Save

Create Importset Table

Description

Import Set Table

The **Import Set Table** is a temporary staging table used to store employee data uploaded from the spreadsheet. It contains fields such as **Employee ID, Name, Email, Department, and Location**. The imported data is stored in this table before it is validated and transformed into the final employee records.

Navigation:

Go to Application Navigator

Load Data

Click on Load Data and create an import table

Fill details as shown below

Label: Employee Import

Name: u_employee_import (auto populated)

The screenshot shows the 'Load Data' interface. At the top, there is a 'Load Data' button and a 'Submit' button. Below these, the 'Import set table' section has two radio buttons: 'Create table' (selected) and 'Existing table'. A red box highlights the 'Label' field with the value 'Employee Import'. Below it, the 'Name' field is populated with 'u_employee_import'. The 'Source of the import' section has two radio buttons: 'File' (selected) and 'Data source'. A red box highlights the 'File' section, which includes a 'Choose file' button and the text 'Sample Spreadsheet.xlsx'. Below this, the 'Sheet number' is set to '1' and the 'Header row' is set to '1'. A 'Submit' button is at the bottom.

Click on Submit

Once we click on Submit, we can see the success message as shown below.

Also we need to make sure to click on Create Transform Map.

The screenshot shows the 'Progress' section with a green bar indicating the process is complete. The 'Name' is 'ImportProcessor', the 'State' is 'Complete', and the 'Completion code' is 'Success'. A red box highlights the 'Completion code' field. Below the bar, a message states: 'Processed: 15, inserts 15, updates 0, errors 0, empty and ignored 0, ignored errors 0 (0:00:01.368)'. The 'Next steps...' section lists several actions: 'Import sets' (Go to the import sets for this data load), 'Loaded data' (Go to the newly imported data inside the staging table: u_employee_import), 'Create transform map' (Create a transform map for the newly staged data), and 'Import log' (View the import log). A red box highlights the 'Create transform map' link.

Create Transform Map

Description

Transform Map

The Transform Map defines how data from the Import Set Table should be transferred to the target Employee table. It maps fields such as Employee ID, Name, Email, Department, and Location from the imported data to the corresponding target fields. Employee ID can be used as the coalesce field to update an existing employee record or create a new record when the employee does not already exist.

Give inputs as shown below.

Name: Sample Spreadsheet Import

Source Table: Employee Import is auto-populated

Target Table: Employee Test - as we created earlier

Click on Auto Map Matching fields.

Table Transform Map
New record

* Name: Sample Spreadsheet Import

* Source table: Employee Import [u_employee_import]

Active: ☒

Run business rules: ☒

Enforce mandatory fields: No

Copy empty fields: ☐

Create new record on empty coalesce fields: ☐

Application: Global

Created:

* Target table: Employee Test [u_employee_test]

Order: 100

Run script: ☐

Submit

Related Links

Now click on Transform link as shown below

After clicking Transform, make sure you see the success message as shown below.

Transform Data & Validate

Description

Transform Data

The **Transform Data** process transfers employee information from the Import Set Table to the target Employee table using the Transform Map. It maps and converts fields such as **Employee ID, Name, Email, Department, and Location** and ensures that the imported data is stored correctly in the target table.

Validate Data

The **Validate Data** process checks the imported employee information before it is added to the target table. It ensures that required fields such as **Employee ID, Name, and Email** contain valid data and helps identify incorrect or incomplete records so they can be corrected.

Navigation:

Open Employee Test Table from application navigator as shown below.

As our import got succeeded, all the records are created in the Employee Test Table.

Department	Email	Employee ID	Employee Name	Location
ServiceNow	test3@gmail.com	SB-0003	Meghana Katoju	Hyderabad
ServiceNow	test1@gmail.com	SB-0001	Ratan Kumar	Hyderabad
ServiceNow	test15@gmail.com	SB-0015	Srinu Nandipalli	Hyderabad

Enable Coalesce to Avoid Duplicate Records

Description

In real projects, the same employee data may be imported multiple times. To prevent duplicate employee records, we use **Coalesce**. The Coalesce will update the same records with new values if we add and the duplicate values are not inserted.

Steps:

Open Transform map Under System import sets On All menus.

Open the Created Transform map , Name is Sample Spreadsheet Import.

Under Related list, select the Field maps Section and Make any one field Coalesce True which appears in False.

Now save the form.

Then again add some data which is in Excel format.

Open Transform map Which You are Created

Table Transform Maps							
Name	Source table	Target table	Run business rules	Order	Active	Updated

Inserting New Data In Excel Format

Description

Steps :

Navigate to All menus.

Search for Load data Under System Import set Open Load Data.

Fill the details as

Import set table as select Existing table {Employee Import}.

Source of Import is Select File and choose the file from Files.

Sheet number : 1, Header row : 1.

Now Click submit.

Load Data Submit

Import set table ☐ Create table

☒ Existing table

Import set table: Employee Import [u_employee_import]

Source of the import ☒ File

☐ Data source

File: Choose File spreadsheetproject.xlsx

Sheet number: 1

Header row: 1

Submit

Newly Created Excel Data is this.

Employee ID	Name	Email	Department	Location
SB-0016	Siri	test16@gmail.com	Aiml	Chennnai
SB-0017	Naga sai	test17@gmail.com	Aiml	Hyderabad
SB-0010	Raviteja	test18@gmail.com	Servicenow	Hyderabad
SB-0004	Ajay	test4@gmail.com	Servicenow	Hyderabad

It is the previously added data.

Now, In this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.

That Raviteja Employee Email was Changed to

[test10@gmail.com → test18@gmail.com].

And Employee ID with SB-0004 name was changed to

[Ajay kumar → Ajay].

And two other new Employee ID's are added.

Now after submitting the form it appears as State Completed and Success.

Progress

Name	ImportProcessor
State	Complete
Completion code	Success
Message	Processed: 4, inserts 4, updates 0, errors 0, empty and ignored 0, ignored errors 0 0:00:00.040

Next steps...

- [Import sets](#) Go to the import sets for this data load
- [Loaded data](#) Go to the newly imported data inside the staging table: u_employee_import
- [Create transform map](#) Create a transform map for the newly staged data
- [Run Transform](#)** Transform a loaded import set using an existing transform map
- [Import log](#) View the import log

Now Click the Run transform Under the next steps.

Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.

Specify Import set and Transform map

Import set: ISET0010004 - u_employee_import (2026-01-29 11:58:26)

Available maps

Selected maps, run in order

- Sample Spreadsheet Import - u_employee_test

Transform

Progress

Name	Transforming: ISET0010004
State	Complete
Completion code	Success
Message	Transformation complete

Next steps...

- [ISET0010004](#) Go to the import sets for this data load
- [Transform history](#)** Show the transform history, related errors and log
- [Import log](#) View the import log

Now the State is completed and Success.

Now again click on the Transform history then it shows the newly added data and its status of Inserted and Skipped values out the given data.

Transform Histories												
Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
2026-01-29 03:47:37	Complete	2026-01-29 03:47:38	1 Second	ISET0010003	Employee Import [u_employee_import]	4	2	2	0	0	0	Sample Spreadsheet Import

From the above figure : total 4 rows are uploaded out of 2 are Inserted that are two new ID's.

And 2 rows are updates that are Same ID's with different Name and different Email that we changed.

Then Open the Employee Tests table and see the rows updated and inserted.

Employee ID	Employee Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Guja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Meghana Katoju	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitla Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Raviteja	test18@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Srinu Nandipalli	test15@gmail.com	ServiceNow	Hyderabad
SB-0016	Siri Naga sai	test16@gmail.com	Aiml	Chennai
SB-0017		test17@gmail.com	Aiml	Hyderabad

Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.

Then Open the Transform history to check

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
2026-01-29 05:39:36	Complete	2026-01-29 05:39:36	0 Seconds	ISET0010004	Employee Import [u_employee_import]	4	0	0	4	0	0	Sample Spreadsheet Import

Here we can see the total 4 are uploaded.

On that 0 rows are Inserted and updates 0 and Ignored 4 rows.

That same sheet we uploaded to the same transform map we created.

Report 1

Description

Create Reports on Employee Test Table

Navigation Steps :

Table : **Employee Test**, Now click the Next button

Now after Clicking next in type Select **Pie chart** .

And click the **next** button

Now In Configure Select Group by **Department** Field.

In the Aggregation Field Select **Count**.

Then Click **next**.

Adding Reports to Dashboard

Description

Create Dashboard

Navigation :

Open All menus → Search for Dashboards.

Under Self Service → Click Dashboards.

On the top right corner Click Create Dashboards or

You can create Directly by using the backend name[PA_DASHBOARDS.FORM].

Then Click New to Create new Dashboards.

Only the backend name will open the form if the **ACL** has the **pa_dashboards** access to **Admin Overrides** True only.

Then only we have access to the form

The screenshot shows the 'Create a report' interface with the 'Configure' tab selected. The 'Group by' dropdown is set to 'Department'. The 'Aggregation' dropdown is set to 'Count'. The 'Next' button is highlighted with a red box. The main area shows a pie chart titled 'Employees by Department'.

Now In Style Leave the Chart color by default.

And Click the Run button to Execute the given data Report.

And Click save button to Save the Report.

The screenshot shows the 'Create a report' interface with the 'Style' tab selected. The 'Chart color' dropdown is set to 'Use color palette'. The 'Run' button is highlighted with a red box. The main area shows a pie chart titled 'Employees by Department' with a legend at the bottom.

Department	Count	Percentage
ServiceNow	11	64.71%
Salesforce	4	23.53%
Almi	2	11.76%

Adding Reports to Dashboard

Description

Create Dashboard

Navigation :

Open All menus → Search for Dashboards.

Under Self Service → Click Dashboards.

On the top right corner Click Create Dashboards or

You can create Directly by using the backend name[PA_DASHBOARDS.FORM].

Then Click New to Create new Dashboards.

Only the backend name will open the form if the **ACL** has the **pa_dashboards** access to **Admin Overrides** True only.

Then only we have access to the form

After Opening the ACL Search the pa_dashboards on Name Column

Access Controls							
All > Name starts with pa_dashboards							
Name	Decision Type	Operation	Type	Active	Updated by	Updated	
pa_dashboards	Allow If	write	record	true	admin	2019-03-25 09:32:03	
pa_dashboards	Allow If	write	record	true	admin	2016-04-19 03:29:14	
pa_dashboards	Allow If	read	record	true	admin	2019-03-25 09:34:18	
pa_dashboards	Allow If	report_view	record	true	admin	2022-11-16 22:19:19	
pa_dashboards	Allow If	delete	record	true	admin	2016-04-19 03:26:55	
pa_dashboards	Allow If	read	record	true	admin	2018-03-01 07:27:17	
pa_dashboards	Allow If	create	record	true	admin	2026-01-29 22:47:37	
pa_dashboards	Allow If	delete	record	true	admin	2019-03-25 09:35:29	
pa_dashboards.*	Allow If	query_range	record	true	@@snc_write_audit@@	2025-09-08 22:49:16	
pa_dashboards.group	Allow If	write	record	true	admin	2016-07-28 06:29:53	
pa_dashboards.notification_link_label	Allow If	query_range	record	true	@@snc_write_audit@@	2025-09-08 22:49:16	
pa_dashboards.notification_text	Allow If	query_range	record	true	@@snc_write_audit@@	2025-09-08 22:49:16	
pa_dashboards.owner	Allow If	write	record	true	admin	2021-11-04 08:32:01	
pa_dashboards.restrict_to_roles	Allow If	write	record	true	admin	2016-09-08 02:00:29	
pa_dashboards.restrict_to_roles	Allow If	query_range	record	true	@@snc_write_audit@@	2025-09-08 22:49:16	
pa_dashboards.restrict_to_roles	Allow If	write	record	true	admin	2018-03-01 08:50:55	

Now Open the **Create Operation** row

The screenshot shows the 'Access Control' configuration page for the resource 'pa_dashboards'. The 'Type' is set to 'record' and the 'Operation' is set to 'create'. The 'Decision Type' is 'Allow If'. The 'Admin overrides' checkbox is checked. The 'Protection policy' is set to 'None'. The 'Name' is 'Dashboard [pa_dashboards]' and the 'Description' is 'Allow create for records in pa_dashboards, for users with role maint.'. The 'Applies To' section has buttons for 'Add Filter Condition' and 'Add OR Clause'. The 'Update' button is highlighted in the top right corner. Below the configuration form, there is a 'Conditions' section with a blue box containing text about decision types and a 'More Info' link.

Then Click Enable the True for Admin Overrides and Update the Form.

Then the creation of dashboards will be possible by using the backend name.

Now Open the **PA_DASHBOARDS.FORM** create dashboard.

Dashboard name : **Employee Analytics Dashboards.**

Save the Form.

Add Reports to Dashboards.

Navigation Steps:

Open the **Previously Created Reports**.

On All menus → type Reports Under **Usage and Governance** select **reports**.

Open the **Employees by Department**.

Select the **Edit Report** and Click the **Share** button then the right top corner Select the **Add to Dashboards** Option.

Then Choose the Created **dashboard name** and Click **Add** button

Same Like that do the remaining **2 reports** in the same navigation how we added **Employees by Department**.

The **Employees by Location** and **Employee List Report** these two reports are also added to the created dashboard.

After Opening the Report Click the **View Report** Button on the right side of the Context menu.

Report
Employees by Department

Please configure this report using Edit Report, and create new reports using View / Run.

Application: Global

Title: **Employees by Department**

Table: Employee Test [u_employee_test]

Field Name: u_department

Type: Pie

Chart size: Large

User: 6816f79cc0a8016401c5a33be04be441

Filter: Add Filter Condition Add OR Clause

Roles: [edit icon]

Update View Report Edit Report Delete

SN.Utils.Versions (2)

After Clicking the View Report button, Now Click the **Share** button and then share options are visible on the right side.

Now click the **Add to Dashboards**

Now Add the Dashboard that you created called **Employee Analytics Dashboards**.

Then Click **Add** button.

Now the **Report** is added to the **dashboards**.

Now, Same in the process, add the remaining **two reports** to the **dashboard**.

From the + icon also we add widgets that our reports from there.

If we want we can also configure the background color

Here the three Reports are added successfully by varying **Department , Location and List Report**.

We can also restrict the **Users,Groups and Roles** From Share Option.

Conclusion:

This project successfully implemented an automated employee data management solution using ServiceNow Import Sets and Transform Maps, ensuring accuracy, efficiency, and data integrity throughout the employee onboarding and update process.

A key enhancement in this project was the use of Coalesce in the Transform Map. By enabling Coalesce on the Employee ID field, the system intelligently identifies existing employee records during every import. This prevents the creation of duplicate records and ensures that repeated imports update existing data instead of inserting redundant entries. As a result, the employee database remains clean, reliable, and consistent, which is critical in real-world enterprise environments where data may be imported multiple times from external systems.

In addition to data integrity, the project was extended with Reports and Dashboards to provide meaningful insights and real-time visibility into employee data and import activities. Custom reports were created to track:

Total employee records.

Newly added employees.

Updated employee records.

Department-wise employee distribution.

Import success and error counts.

These reports were then consolidated into a Dashboard, allowing administrators and HR teams to monitor employee data trends, import performance, and data quality from a single centralized view. Dashboards improved decision-making by presenting information visually through charts and graphs, reducing the need for manual analysis.
